

NATURAL SOAP – NATURAL SOAP WHITE

What makes the soap unique is that it contains coconut fats and soy which forms a protective film and makes future cleaning easier.

INSTRUCTIONS:

Using lukewarm water, mix the WOCA Soap at a normal solution of 1:40, and at a solution of 1:20 for dirtier floors. Never clean oak floors with a solution of more than 1:40.

Soap Mixing Solutions:

Using lukewarm water,

2 gallons water with **6.4 ounces** (about 3/4 cup) of Soap

3 gallons water with **9.6 ounces** (about 1 1/4 cups) of Soap

4 gallons water with **12.8 ounces** (1 1/2 cups) of Soap

PRE-APPLICATION NOTES

Do not use too much soap or footprints will show on the floor. If this happens, use the WOCA Wood Cleaner.

1. Thoroughly sweep and or vacuum the wood floor.
2. Using 2 buckets, mix the WOCA Soap that is shaken well with lukewarm water in one bucket and only lukewarm water in the second bucket as the rinse.
3. Begin by cleaning an area of about 4' x 8' at a time. Soak the mop in the soap bucket then wring it out over the soap bucket. Mop the area side to side spreading the solutions over the area. If a spot is overly soiled, let an extra amount of soap soak the area for a couple of minutes then come back with a dish scrubbing brush.
4. Rinse the mop well. Ring out over the rinse bucket. Do not apply the rinsed mop to the floor.
5. Repeat Steps 1 - 4 until the floor is completely clean. Any spots that have water after 5 minutes be wiped up with the mop.
